

# SPREAD II Emergency Teletext Broadcasting System

**SPREAD II** is the emergency teletext broadcasting system. The teletext information is generated inside SPREADII with the template layouts/patterns by emails (PC and Mobile etc.) which are sent from the fire department, Police, Administration and Government etc. as the emergency accident/fire information.

Also **SPREAD II** has the broadcasting function of the still images for the commercial announcement and advertisement purpose.

## Future

- Mail base teletext broadcasting function
- Automatic template layout/pattern broadcasting function which is composed with the teletext informations of emails by the order of priority and keyword customer can assign as requested.
- Automatic broadcasting ordering function by the order of priority, keyword and email address.
- Still image broadcasting function and Still image editing function.
- Cooperation/Link function with the external FTP site and Data service company etc. as the broadcasting information.

## Screen sample : Announcement of emergency information and Release
